

## A new way to tackle CVD risk - a digital resource

### What is the Clinical Digital Resource Collaborative (CDRC) Precision?

The CDRC is a suite of **fully funded** digital resources to enable individuals and organisations to efficiently deliver **gold-standard patient care**.

Users can access the benefits the CDRC has to offer via their existing clinical systems (**e.g. SystemOne and EMIS**).

The CDRC was designed and developed in the North East and North Cumbria by a local GP (**Dr Gareth Forbes**) and is supported by NHSE, NECS, and the Academic Health Science Network for North East and North Cumbria (AHSN NENC) working together to ensure the resources are **fit for purpose, safe, and add value to clinical systems**.

### How can CDRC Precision help you?

- **Improved quality and safety** for patients, clinicians and the NHS at no additional cost by quickly identifying patients who are undiagnosed, misdiagnosed or coded incorrectly.
- **Improved time / cost savings** via efficient patient care and by utilising pre-designed, validated resources.
- **Improved performance management** by proactively managing **Quality and Outcomes Framework targets**.
- **Increased income** by maximising Quality and Outcomes Framework.
- **Safe and compliant data sharing**.
- **Flexible implementation** allowing clinicians to decide what's important to them and their practice.

### What are the additional benefits of system-wide working?

- Improved **patient engagement**.
- **Effective Integration** of health care.
- More effective working **across organisations**.
- Promotion of **skills and innovation**.

### How does CDRC Precision work?

#### Dynamic Templates

#### Contextual alerts & patient status icons

#### Powerful searches

#### Standardised regional referral information

### Who is CDRC Precision for?

- Healthcare providers (HCPs) managing individual patients in practice.
- HCPs working as a 'lead' within their organisation – looking after a particular cohort of patients / clinical area.
- Admin team e.g. Long-Term Condition review organisation
- Larger organisations e.g. CCGs, Primary Care Networks, Federations for population-based interventions.

### Does CDRC Precision improve outcomes for patients?

- A **mixed methods evaluation** was undertaken from **January to June 2019** highlighting a pre and post intervention for several cardiovascular disease performance indicators.
- **Significant differences were identified in all 6 indicators**.
- **Qualitative positive feedback was received from clinical and non-clinical staff**.
